

CARTOGRAPHIES OF THE INTERNET

The Internet is nothing like a cloud. It is a physical structure, geolocated and crossed by power relations.

Who holds the power in this structure? Who has access to this technology? Who profits, who loses, who consumes, who regulates? The Internet is also a territory in dispute, a clash that affects our offline struggles.

GEOPOLITICAL DIMENSIONS OF THE INTERNET

- extraction of mineral resources
- higher internet connection ratio per inhabitant
- mainstream hardware and software producers
- main destinations of electronic waste
- density of submarine internet cables
- main data flows

- Potassium
- Bauxite
- Cobalt
- Cesium
- Gold
- Diamond
- Copper
- Tin
- Lithium
- Tantalum
- Tungsten
- Platinum

CREDITS

The Cartographies of the Internet is a project developed by Coding Rights, with collaboration from the Transfeminist Network for Digital Care and support from the Heinrich Böll Foundation Brazil.

Concept: Joana Varon, Clarote
Research: Joana Varon, Bruna Zanolli
Design: Clarote
